

Addressing a greenhouse gas emission target is so very important!!! As, are all issues that hurt our environment and planet! So, PLEASE get that done! Thank you, I voted for you and I'm counting on you to make the right decision to reduce emissions by 55% by 2035!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Sharon Tuz

Poughquag, NY

Affordable, high speed rail like other countries !!!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Dear Governor, Just a quick note. I would like to commend you on your years of service. I can say that you have done many commendable breakthroughs.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Nancy B Cotto-Fuentes

Rochester, NY

Dear Honorable Gov. Cuomo, It is past time to sign the regional agreement to reduce climate emissions from cars and trucks by over 55% by 2035. What is happening to vehicles that are used by New York State?? Are they electric??? Are you driving an electric car??? Are the people in your administration who represent N.Y.State driving electric cars?? Lets get moving! As Greta Thunberg Says, we don't have any time to loose!!!

The transportation sector is the largest source of greenhouse gases in New York?s economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That?s why we?re calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they?re wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Susan Smith

N.Y.C.,10012, NY

Dearest Governor, You have been proving to be kind to our city's environment and health. Also your health. Leave a tremendous legacy for yourself and family and kick the polluters out of our city. No politician needs the votes of any Earth killing corporation. Make us proud. Kick them out of our city. Let us ride cleanly through our grand city.

The transportation sector is the largest source of greenhouse gases in New York?s economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Lisa Lindemann

Great Valley, NY

I am sure you are for clean transportation since you are so progressive.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Bernice Baeumler

Buffalo, NY

I am writing as your constituent, who is a physician and public health advocate and a survivor of Superstorm Sandy, I have witnessed the disaster of climate change and strongly support the transition of our country to a clean energy economy. I am alerting you to the fact that governors from across the Northeast and Mid-Atlantic released a draft agreement to limit climate pollution from motor fuels and invest in an economy built on clean transportation. These changes will reduce traffic congestion, make clean vehicles more accessible, increase jobs, and grow the economy. I very much urge you to please adopt a bold plan to reduce motor vehicle climate emissions by 55% by 2035. The evidence is clear and I thank you for your consideration of my letter and I urge you to please lead our state to limit pollution from motor fuels and create clean energy transportation jobs for all New Yorkers. Sincerely, Jean Marie Naples, MD-Ph.D.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Pam Lucas

Horseheads, NY

I bike to work everyday and breath in auto and truck exhaust while I do. Reducing vehicle emissions will not only mitigate disastrous climate damage, but it will also inspire others to seek out alternate commuting options like I did, to help further reduce our carbon footprint.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Margaret Dunlevy

New York, NY

I remember how the near-by highway reeked of motor exhaust. And wondering how it was affecting by breathing, lungs, whatever. Later, wondering about its effect on my family, and the wildlife and vegetation around it. Still later, I'm thinking about those emissions and their horrendous effect on our climate. Climate Change, a game changer. I agree wholeheartedly with the printed message.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Scott Disbrow

Elmira, NY

I've been a teacher for 37 years in the Valley Stream Central High School District. Over those years, there has been a marked increase in the number of students with asthma problems. Each year, we are given a list of students, compiled by our clinic, of students with health issues. The list of students with asthma grows longer every year. Pollution caused by cars powered by gasoline is undoubtedly a main contributor to this phenomenon. Our school is located within 5 miles of JFK and right alongside the Southern Parkway at Fletcher Ave. We need the help of the Transportation and Climate Initiative to counter this serious health concern for our children.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Jay Blackman

East Meadow, NY

I've traveled all across this state, and I've lived all around this country. It's a beautiful place worth preserving. If we fail to take action on pollution now, we will not have a beautiful state to live in or even a beautiful world in the future. We must do everything we can to curb the destruction we have already done.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

George Davis

Brooklyn, NY

If climate change is not addressed first, nothing else matters.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Paulette Willett

Hamburg, NY

In rural western NY we need commuter rail back. As the population ages people will become more and more isolated because of the tax supported dependence upon the automobile. We will need transportation infrastructure to get to places like Rochester and Buffalo which represent not only retail and cultural hubs but are also medical hubs. This issue has really been ignored!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Susan Siegel

Hampton Bays, NY

It is clear that the current Federal Government is unwilling to act and has, in fact, decided that rolling back regulations is okay. That leaves it up to individual states to implement green initiatives. Please, don't let Donald Trump ruin the progress that has been made and instead, move New York State forward into a green, sustainable 21st century. It's time to take show the fossil-fuel industries that they do not hold sway over us!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Kingston, NY

Make NY the leader in innovative solutions. Let's be in reality and pro-active. Thank you!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Joanne Dwyer

New York, NY

Make plug in stations more available and promote an increase in sales of plug in hybrid vehicles. They are much more fuel efficient than regular hybrids and are difficult to find in certain models.

Emmalia Harrington

Forest Hills, NY

My daughter suffers from asthma due to the air pollution in the lower westchester area. We know the asthma is caused by the poor air quality because when she is in lake placid NY she do longer needs her medicine. Please clean up the pollution caused by our transportation needs by creating and implementing a plan for electric vehicles, car, buses, trucks. Also create more bike and walking paths so people can get there safely without s car. Please do it soon.

The transportation sector is the largest source of greenhouse gases in New York?s economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Brenda Campbell

Rochester, NY

My religious tradition teaches that God's creation isn't ours to destroy. The earth is only given to us as a sacred trust. And we are required to be faithful stewards for all the generations to come. That means we must end our dependence on fossil fuels -- with all the planet killing pollution that comes from mining and burning them.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Catherine Wachs

Larchmont, NY

Peace and Blessings Governor Cuomo! The New York Transportation and Climate Initiative is very important. Please work with those who are for limiting dirty fuel and thereby creating jobs. We all breathe the air no matter our station on this earth. With public transportation, NYC is an extremely high emission state. I believe higher than most because of buses, cars, trucks, taxis, ambulances, fire trucks, police car activities, and let us not forget the diplomat vehicles. Help by signing the bill to limit emissions. ---please. Thank you for caring enough to govern for the people -- not just for the companies! Peace and Blessing to you and your family. Sallie Jackson Asghar A Born and Raised New Yorker and Human in Need of Clean Air and Water.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Marcelle Kaplan

Merrick, NY

Please continue to be the leader you have shown yourself to be in environmental justice...our state, our nation and our planet need you! 🗣️🇺🇸👤

Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Nancy Frank

Forest Hills, NY

PLEASE~! You can do it.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Helen Mendoza

Woodstock, NY

Pollution in the city in summer particularly is unbearable. Please take action against this. Thank you.

Edgar Fernandez

New York, NY

Support clean fuel! Stop the pollution! Get up the MPG, get rid of coal, oil and gas energy dependence and support the new energy models that have zero emissions! The government has this knowledge but supports the elites who chokehold our society. We are awake now and won't allow this energy industry to write our laws so they can keep lining their pockets! You have the power to influence the right laws be implemented. Stand with us!

Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Elizabeth Maxwell

New York, NY

The only way forward for our children and our future is with an end to fossil fuels emissions and a bold embrace of sustainable energy sources. Thank you Governor

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Erin Quinn

New Paltz, NY

The Paris Agreement has not produced results, states must step up.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Susan Wald

Sag Harbor, NY

There is no reason that we need to depend on fossil fuels. The huge impact that fossil fuels have had on our world was made in only 100+ years. Imagine that, nano second compared to how old the earth is. How much more time do we have??? We need to act now. My family and I cut the fossil fuel cord 12 years ago. We now make our own safe solar powered electricity and we all drive electric or electric plug in vehicles. We save thousands per year using renewable energy. Gov. Cuomo. I invite you to come see our system and how easily this can be done. John P Hafner

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Paul Jenner

Jackson Heights, NY

We deeply regret that you and Andrew Byford could not come to agreements on the MTA. We do not understand why the State Government is still in charge of our City's transportation system, which was highly reliable when we were children and teenagers (we could rely on catching a particular train at a particular time and arriving at a particular time, to the minute!), and is now drastically underfunded. This is true with regard to pollution as well as routes, schedules and outmoded vehicles and switches. It is good you took an interest in built-up silt in the drains, but you seem not to have let Mr. Byford do the rest of his job, which he was doing very well.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. C. M. Pyle

New York, NY

We do need clean transportation and soon. The Transportation and Climate Initiative represents an acceptable interim objective for which a durable long term objective should be on the drawing board already. This is going to get touchy before the interim pattern lays out. The only reason it hasn't been acknowledged already is utterly malignant cowardice.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

janice Becker

Tarrytown, NY

We must ALL DO OUR PART for the integrity of the Environment; The top has been reversing that ; They have acting in opposition toward conservation; Please join us and helo make it a safer; healthier more stable World. GOD BLESS

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Claude Margouleff

Glen Cove, NY

We must electrify the transportation sector if civilization is to survive.

Mike Swensen

Portland, NY

We need new people to live in Buffalo, NY with all the residential urban building going on. There aren't any sustainable building material guidelines for developers either! Bringing jobs here with the Transportation and Climate Initiative would coincide with the destruction of our beloved skyway and create a model green community for Buffalo, NY. Let Buffalo set the bar for other NY cities and the country. We have done it before with electricity, Pam Am Exhibit, the Erie Canal Let us do it again and make Buffalo a model green city . We must get this next growing phase right for the future of our planet. Time IS of the essence. Linda Gellman Elmwood GreenCode Alliance Ashland Avenue Block Club 1st & 2nd blocks + 122 Ashland Ave Buffalo, NY 14222 716-830-8800

Without clean air and water, we are siding and abetting in our children's demise!

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Leah Louise Rubenstein

Woodstock, NY

You have kept fracking out of this state and your environmental leadership is an important model for the whole country. Please establish a bold target for reduction of motor vehicle emissions for our protection and as an example for governors in other states.

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Pamela DeGeyter

Ghent, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Buffalo, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

William Corry

Brooklyn, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Christopher Giordano

Rush, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

James DiMunno

Long Island City, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Kings Park, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Ann Barnett

New York, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Thomas Smith

Bronx, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Laura Mandel

New York, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. bronx, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Nicole Rice

Brooklyn, NY

Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Hugh Keleher

Corning, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Jerry Rivers

Roosevelt, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Noelene Hutchinson

Poughquag, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Janet Downey

Moriches, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Andrei Harabadji

Brooklyn, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Bartholomew Horn

New York, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. New York, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Helen Anbinder

Dobbs Ferry, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Susanna Stone

Middle Island, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Ronald Garner

Bronx, NY

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Kimberly Wiley

Rochester, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Hopewell Junction, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Steven Kroeger

Albany, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Samantha Lioi

Buffalo, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Caterina Campagna

Pearl River, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Rochester, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Jessica Gross

Northport, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

John Neumeister

New York, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Kimberly Ray

Forest Hills, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Brooklyn, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Marijo Lewandowski

Glendale, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.

Stephanie Archer

East Rochester, NY

The transportation sector is the largest source of greenhouse gases in New York's economy, accounting for 36% of emissions, but New York has not identified an interim target for reducing these emissions. That's why we're calling on you to adopt a bold interim target to reduce climate emissions from motor vehicle transportation by 55% by 2035. Over the past year, New York has been helping to design one such policy -- the Transportation and Climate Initiative. The evidence is clear: the more we limit pollution from motor fuels, the more jobs are created, the more the economy grows, and the more lives we save. Dirty energy companies and their allies who want us to buy more gasoline and stay stuck in traffic think they can keep people from realizing that simple truth by talking about gas prices, but they're wrong. Please sign on to the agreement to implement a strong, equitable regional climate protection policy through TCI. Invest in the communities that have suffered the most from burning gasoline and have the least access to clean transportation options. Stop sending our hard-earned dollars out of the state to oil companies. Choose to create jobs, grow the economy, and save lives for families and businesses right here.
